Executive Summary

Summary of methodologies

- Data collection
- Data wrangling
- Data Analysis using SQL
- EDA with data visualization
- Visual Analytics with Folium
- Predictive analysis (Classification)

Summary of all results

- Interactive Visual Analytics
- Exploratory Data Analysis using SQL
- Predictive analysis using a machine learning model

Introduction

- Project background and context

SpaceX advertises Falcon 9 rocket launches on its website, with a cost of 62 million dollars, other providers cost upward of 165 million dollars each, much of the savings is because SpaceX can reuse the first stage. Therefore, if you can accurately predict the likelihood of the first stage rocket landing successfully, you can determine the cost of a launch. With the help of your Data Science findings and models, the competing start-up you have been hired by can make more informed bids against SpaceX for a rocket launch.

- Problems you want to find answers

- Determined the price of each launch.
- Predict if the Falcon 9 first stage will land successfully.

Section 1

Methodology

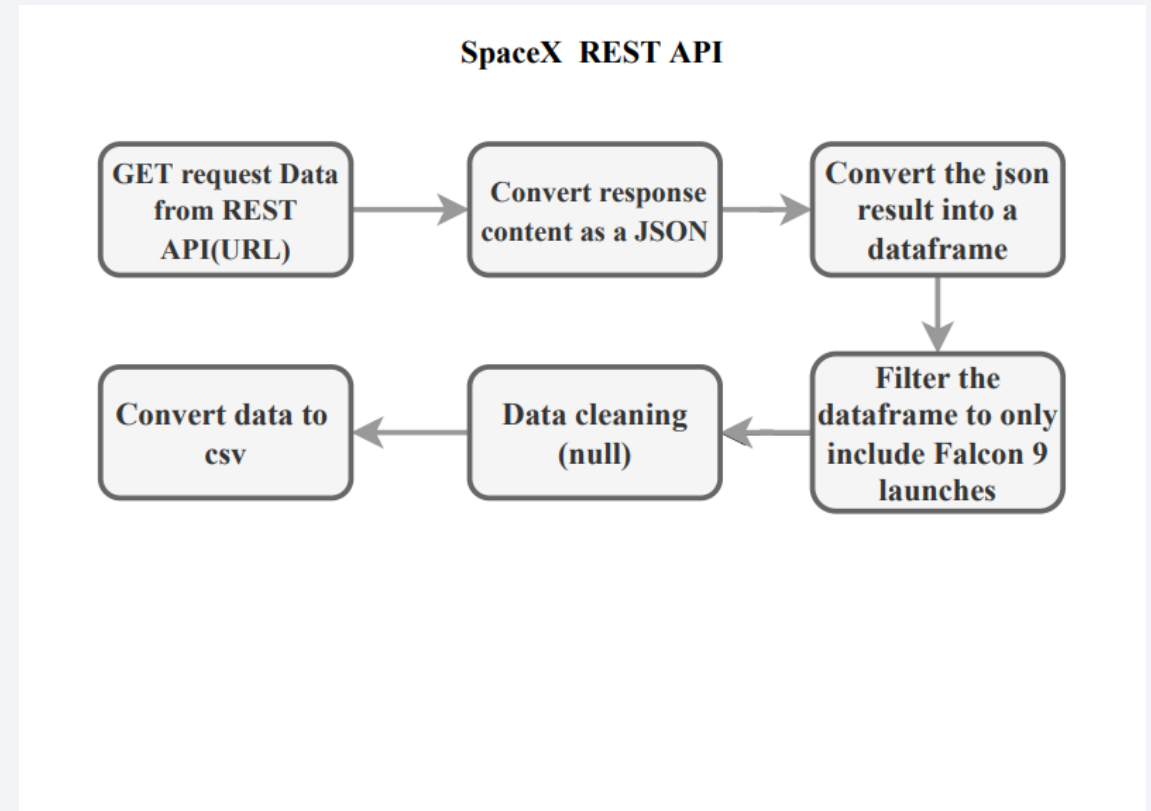

Methodology

Executive Summary

- Data collection methodology:
 - Rest API and Web Scraping
- Perform data wrangling
 - Data are clean of null values, and irrelevant columns and transformed into one Hot Encoding to be applied to Machine Learning.
- Perform exploratory data analysis (EDA) using visualization and SQL
- Perform interactive visual analytics using Folium and Plotly Dash
- Perform predictive analysis using classification models
 - Use RL, KNN, SVM, DT models have been built and evaluated for the best classifier.

Data Collection

- Data that is collected launch data from SpaceX REST API.
- The SpaceX REST API endpoints, or URL, starts with api.spacexdata.com/v4/.

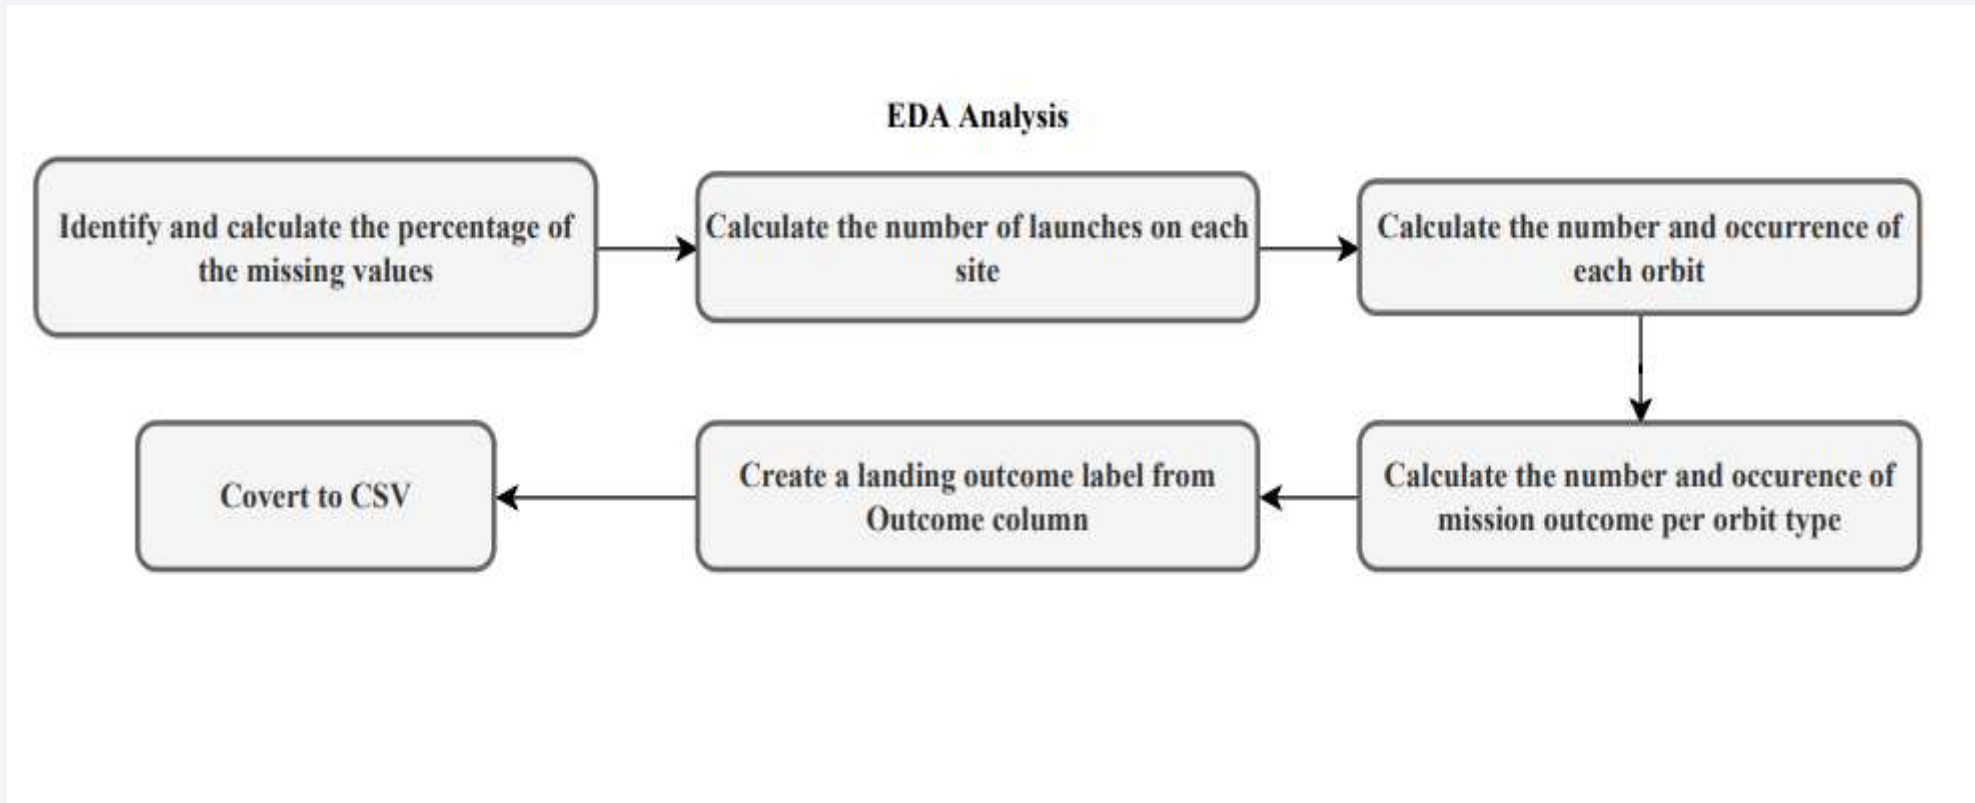

Data Collection – SpaceX API

Data Collection - Scraping

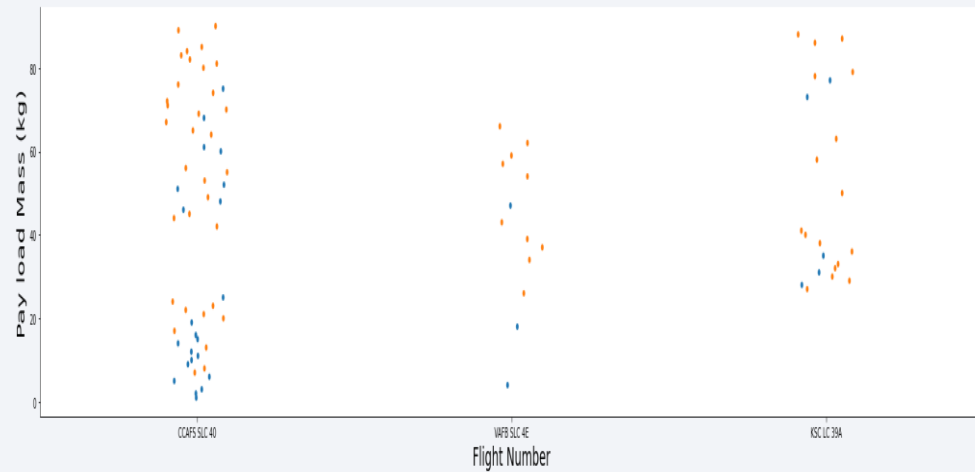

Data Wrangling

Github: [Data Wrangling](#)

EDA with Data Visualization

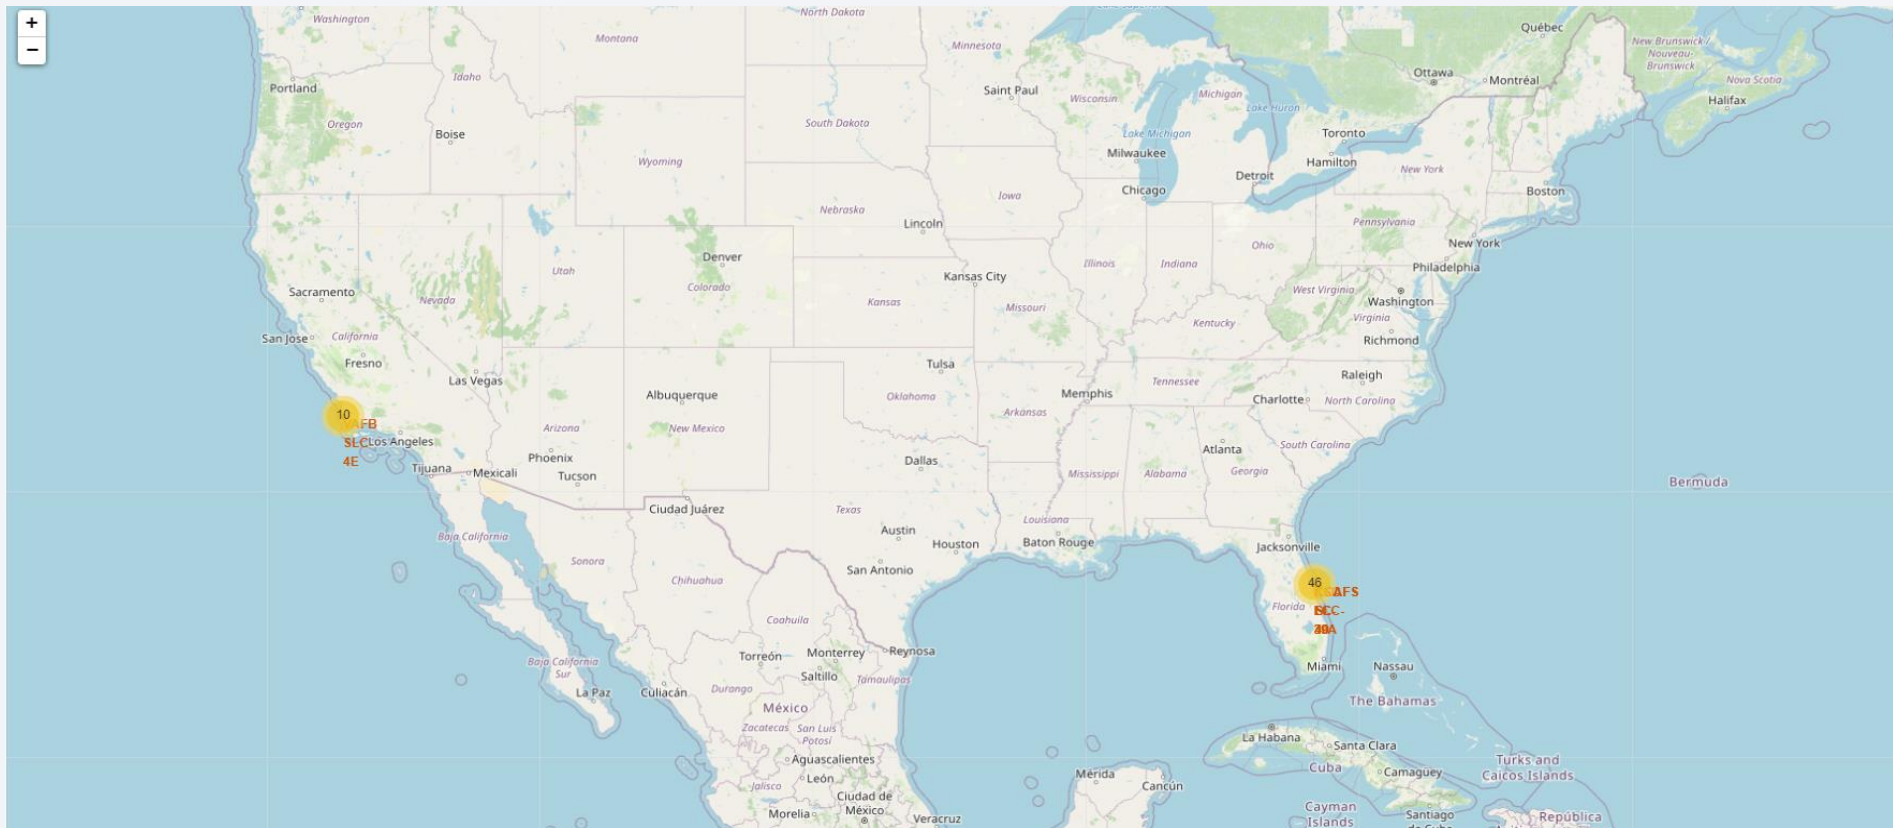

EDA with SQL

SQL queries you performed include:

- Display the names of the unique launch sites in the space mission
- Display 5 records where launch sites begin with the string 'CCA'
- Display the total payload mass carried by boosters launched by NASA (CRS)
- Display average payload mass carried by booster version F9 v1.1
- List the date when the first successful landing outcome in ground pad was achieved
- List the names of the boosters which have success in drone ship and have payload mass greater than 4000 but less than 6000
- List the total number of successful and failure mission outcomes
- List the names of the booster_versions which have carried the maximum payload mass. Use a subquery
- List the failed landing_outcomes in drone ship, their booster versions, and launch site names for in year 2015
- Rank the count of landing outcomes (such as Failure (drone ship) or Success (ground pad)) between the date 2010-06-04 and 2017-03-20, in descending order

Build an Interactive Map with Folium

By using Marker Cluster, I'm able to add the markers having the same coordinate for launch outcomes to each site.

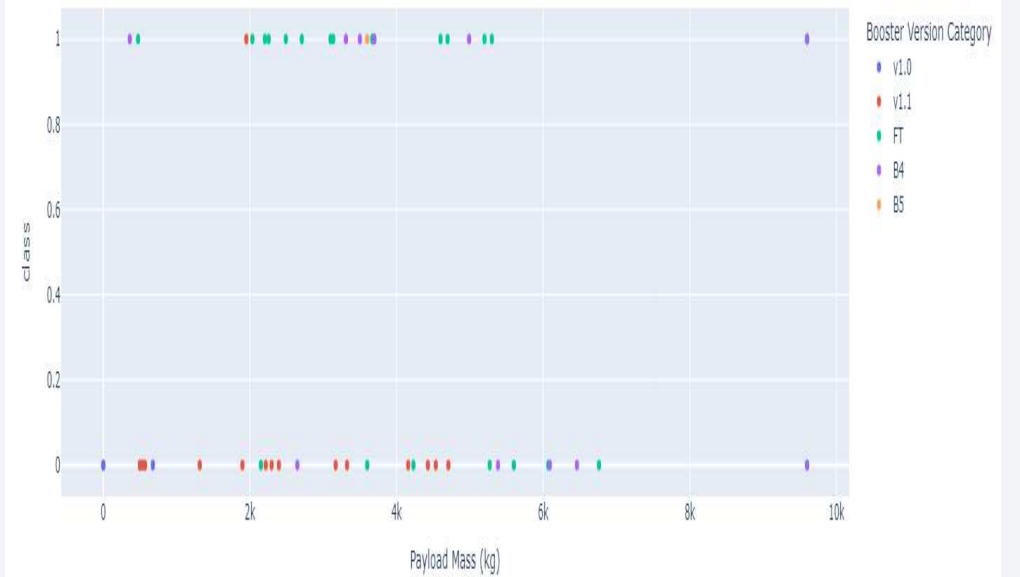

Build a Dashboard with Plotly Dash

Total Success Launches By Site

All sites - payload mass between 0kg and 9,600kg

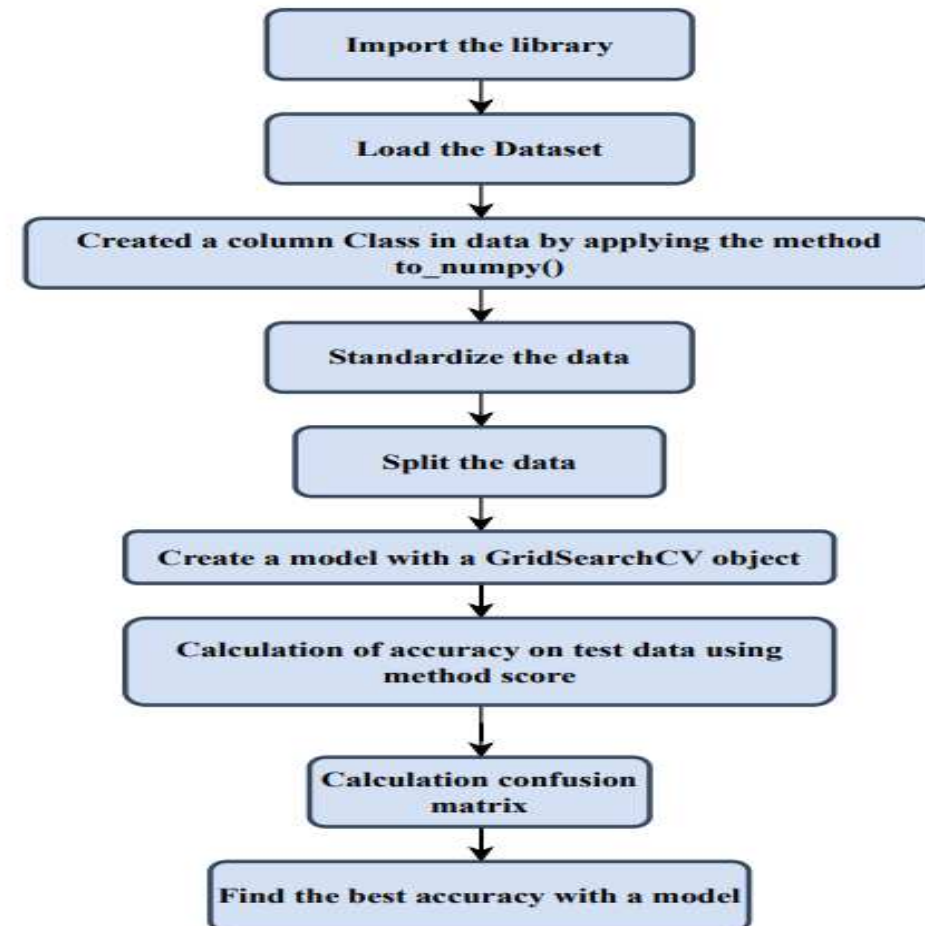

Github: [Dash App](#)

Predictive Analysis (Classification)

- Load the Dataset
- Standardize the data
- Split the data into training and testing data
- Create a model with a GridSearchCV object
- Calculation of accuracy on test data using method score
- Calculation confusion matrix
- Find the best accuracy with a model

Github: [ML Prediction](#)

Space X Falcon 9 First Stage Landing Prediction

Results

- After analysis data the CCAFS SLC-40 site and KSC LC-39A site are has most successful launches from all the sites.
- Orbit GEO,HEO,SSOES L1 has the best Success Rate.
- Decision Tree model are the best in terms of prediction accuracy for this dataset.

The background of the slide is an abstract composition. It features a solid blue area on the left side, which transitions into a dynamic pattern of diagonal streaks in shades of blue and red on the right. Overlaid on these streaks is a fine, light-colored grid or mesh pattern, giving the impression of a digital or data-driven environment.

Section 2

Insights drawn from EDA

Flight Number vs. Launch Site

Visualize the relationship between Flight Number and Launch Site

We see that different launch sites have different success rates. But as we increase the number of flights the success rate increase.

Payload vs. Launch Site

Visualize the relationship between Payload and Launch Site

As well, if increase the number of we Pay Load Mass (kg) the success rate increase.

Success Rate vs. Orbit Type

Visualize the relationship between success rate of each orbit type

- AS we can see ES-L1 , GEO, HEO and SSO have a success rates 100%.

Flight Number vs. Orbit Type

Visualize the relationship between FlightNumber and Orbit type

Payload vs. Orbit Type

Visualize the relationship between Payload and Orbit type

There is a connection between ISS and payload in the range of 2000 to 3000. Also between GTE and Payload at 4000 to 8000.

Launch Success Yearly Trend

Visualize the launch success yearly trend

We can note in the figure that the launch sites begin to increase in success rate from 2013 to approximately 2018, decreases slightly, and then returns to increase with the passage of the year

All Launch Site Names

- %sql SELECT DISTINCT(launch_site) FROM SpaceX

launch_site
CCAFS LC-40
CCAFS SLC-40
KSC LC-39A
VAFB SLC-4E

Launch Site Names Begin with "CCA"

- %sql SELECT * FROM SpaceX WHERE launch_site LIKE 'CCA%' LIMIT 5

DATE	time_utc_	booster_version	launch_site	payload	payload_mass_kg_	orbit	customer	mission_outcome	landing_outcome
2010-04-06	18:45:00	F9 v1.0 B0003	CCAFS LC-40	Dragon Spacecraft Qualification Unit	0	LEO	SpaceX	Success	Failure (parachute)
2010-08-12	15:43:00	F9 v1.0 B0004	CCAFS LC-40	Dragon demo flight C1, two CubeSats, barrel of Brouere cheese	0	LEO (ISS)	NASA (COTS) NRO	Success	Failure (parachute)
2012-08-10	00:35:00	F9 v1.0 B0006	CCAFS LC-40	SpaceX CRS-1	500	LEO (ISS)	NASA (CRS)	Success	No attempt
2013-01-03	15:10:00	F9 v1.0 B0007	CCAFS LC-40	SpaceX CRS-2	677	LEO (ISS)	NASA (CRS)	Success	No attempt
2013-03-12	22:41:00	F9 v1.1	CCAFS LC-40	SES-8	3170	GTO	SES	Success	No attempt

Total Payload Mass

- %sql SELECT SUM(payload__mass__kg_) FROM SpaceX WHERE customer='NASA (CRS)'

F9 B5 B1049.7

2015 Launch Records

- %sql SELECT landing__outcome,booster_version,launch_site,DATE FROM SpaceX WHERE landing__outcome='Failure (drone ship)' AND EXTRACT(YEAR FROM DATE)='2015'

Rank Landing Outcomes Between 2010-06-04 and 2017-03-20

- %sql SELECT landing__outcome , COUNT(landing__outcome) FROM SpaceX WHERE DATE BETWEEN '2010-06-04' AND '2017-03-20' GROUP BY landing__outcome ORDER BY COUNT(landing__outcome) DESC

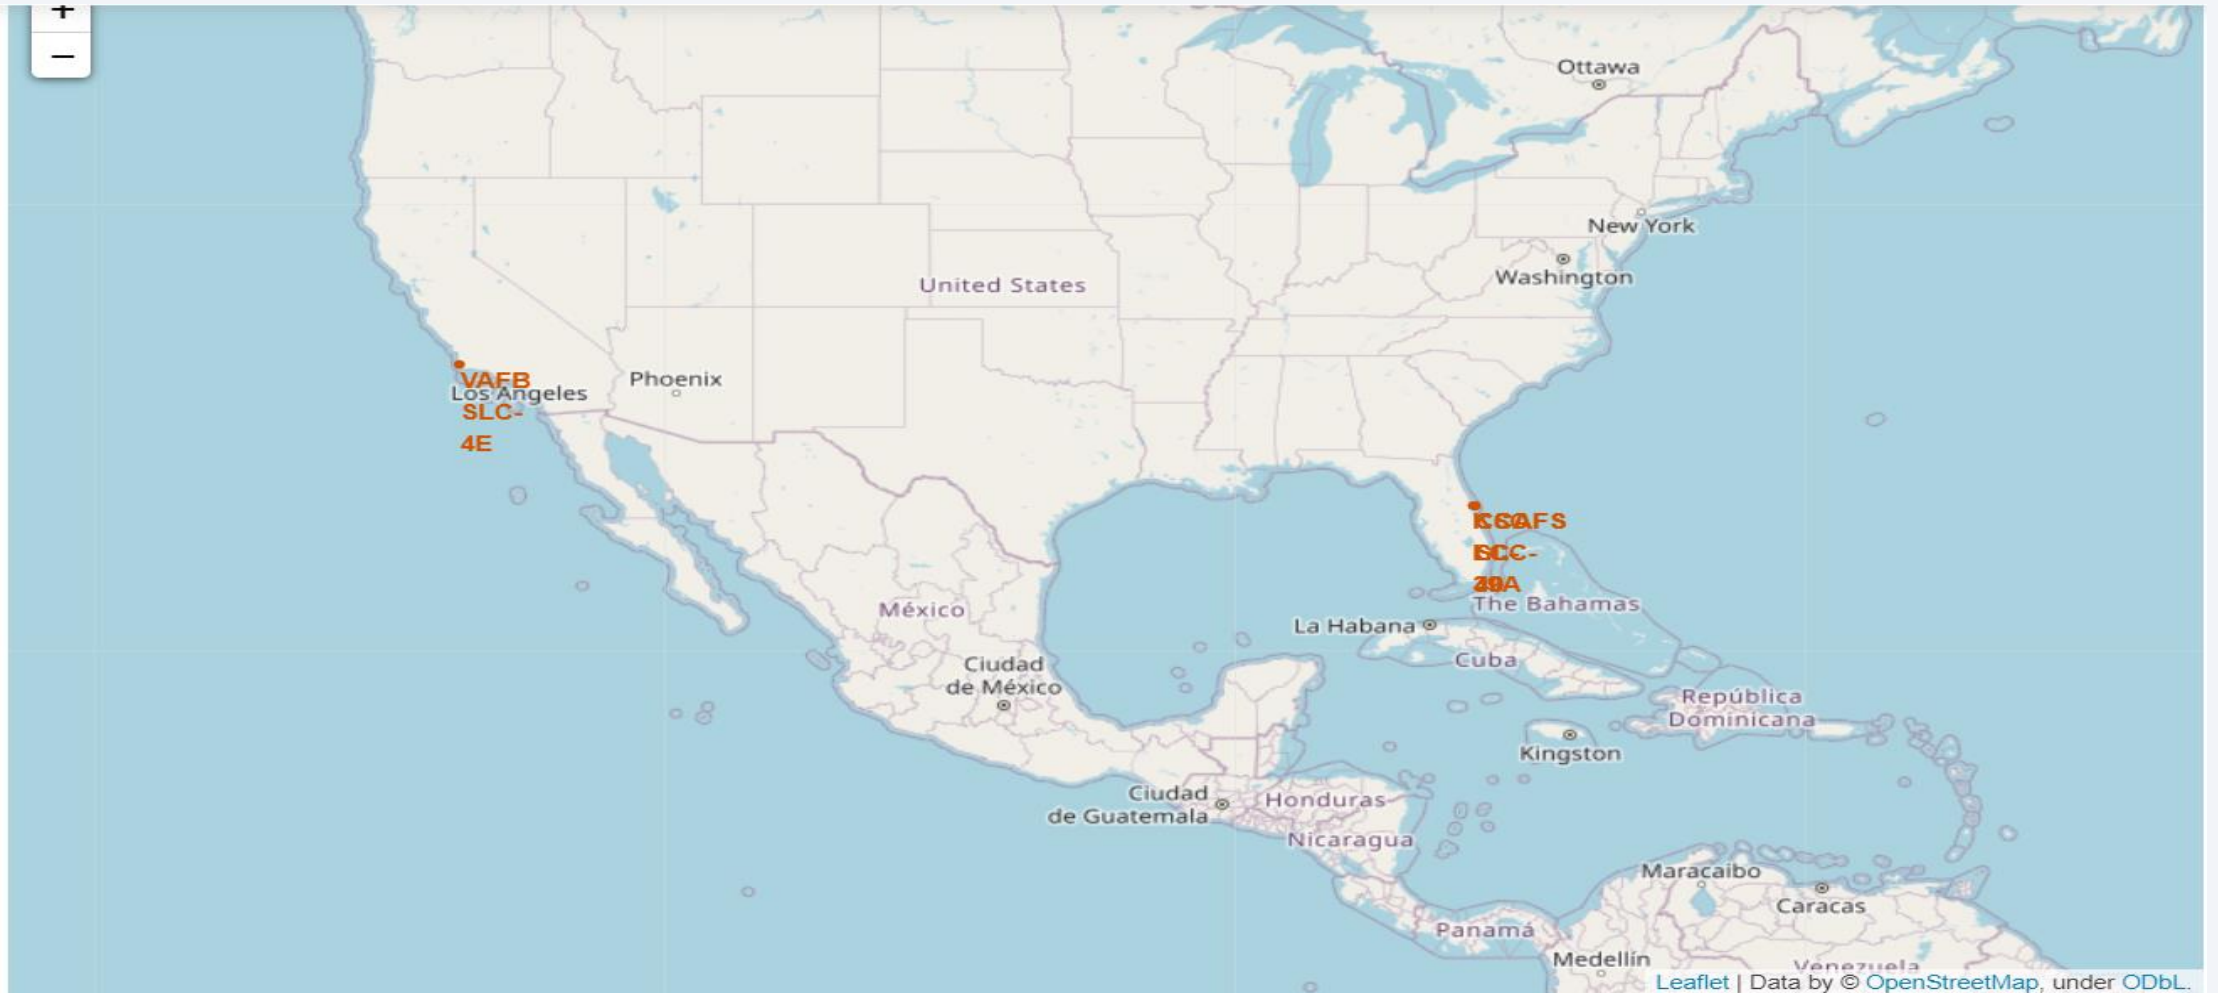

landing__outcome	2
No attempt	10
Success (drone ship)	6
Failure (drone ship)	5
Success (ground pad)	5
Controlled (ocean)	3
Uncontrolled (ocean)	2
Failure (parachute)	1
Precluded (drone ship)	1

A satellite view of Earth from space, showing the curvature of the planet and the glow of city lights at night. The background is a deep blue gradient.

Section 3

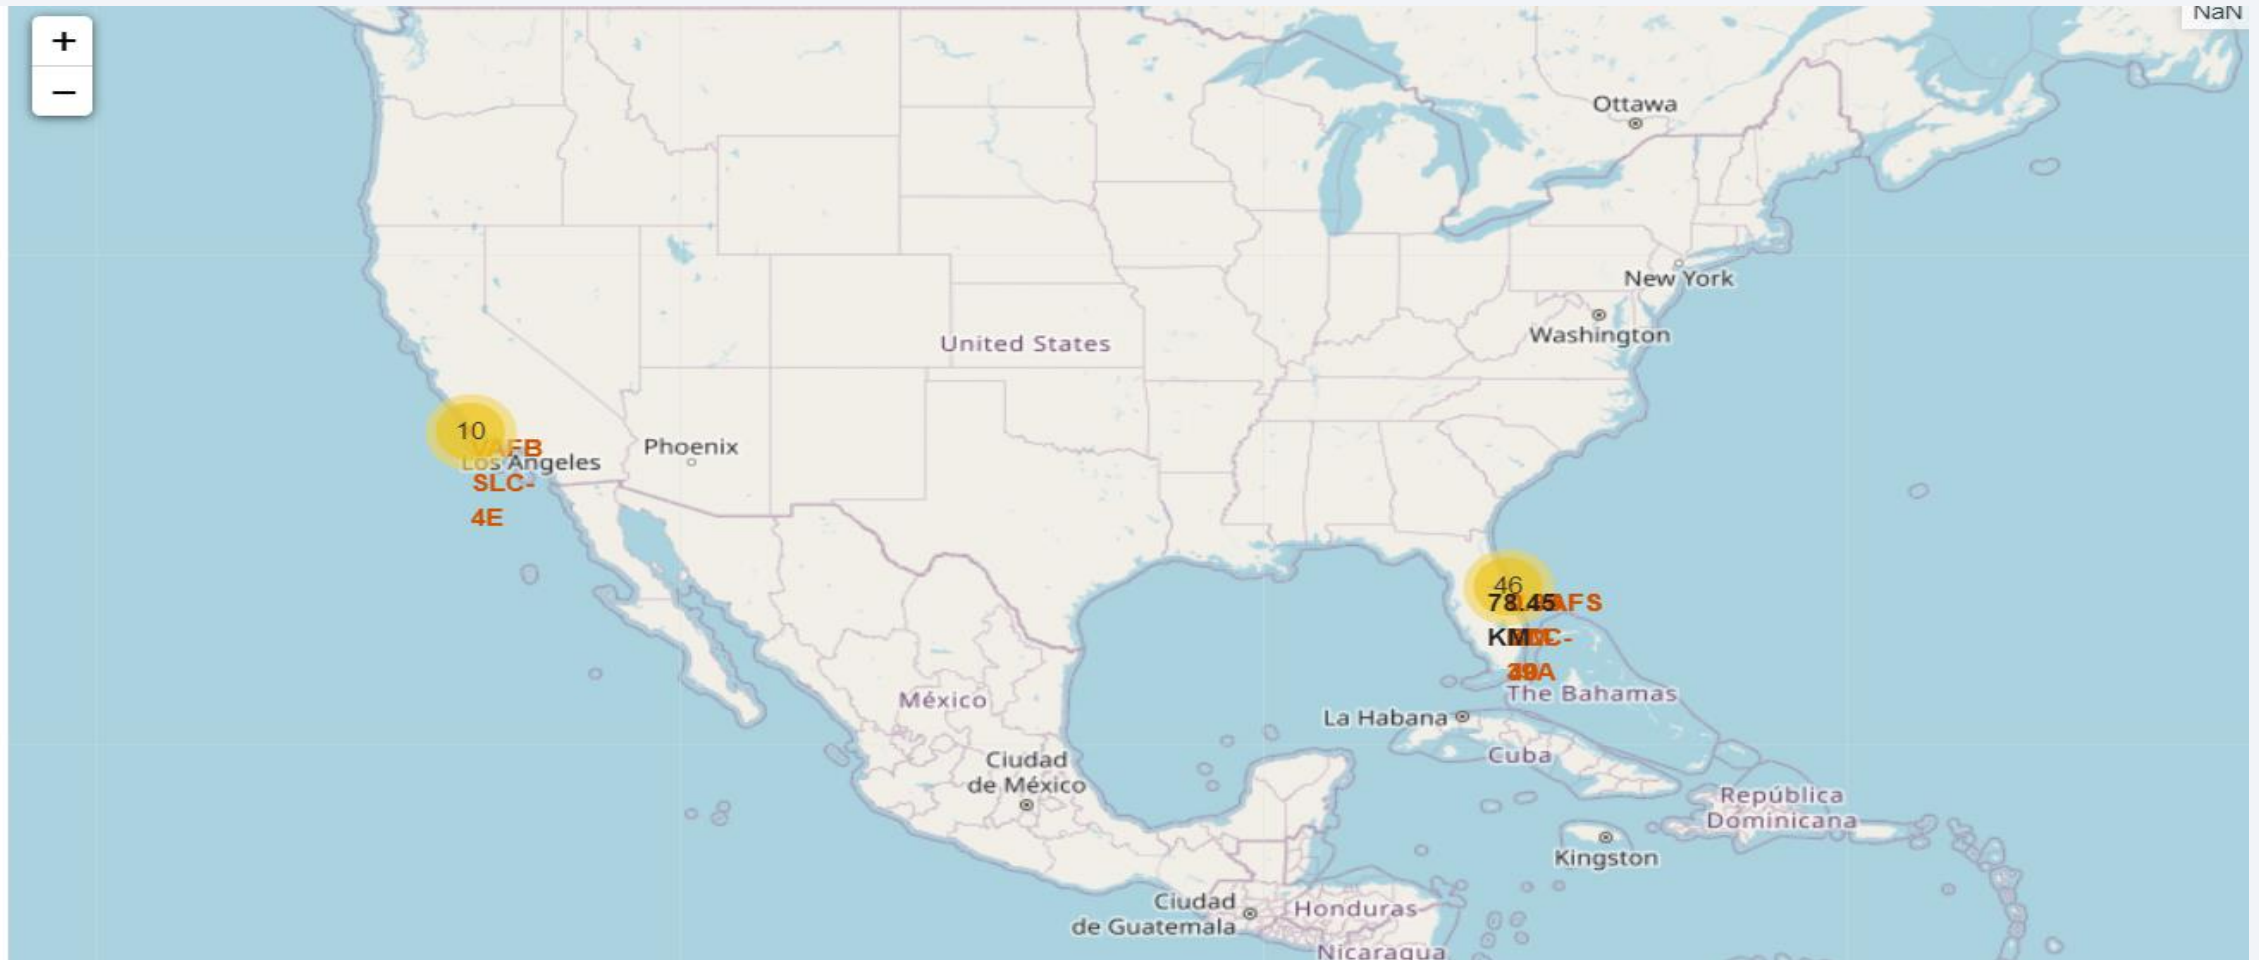

Launch Sites Proximities Analysis

All launch sites on the site map

launch sites by using Marker Cluster

Marker distance between the coastline point and the launch site

The background of the slide is a close-up, artistic photograph of a printed circuit board (PCB). The board is dark, and the intricate circuit traces are highlighted in a vibrant, glowing red. Numerous small, circular components, likely solder joints or micro-components, are visible along the traces, some of which also appear to be glowing. The overall effect is a high-tech, digital aesthetic.

Section 4

Build a Dashboard with Plotly Dash

Total Success Launches

Total Success Launches By Site

Launches for Hight site Score

Total Launches for site KSC LC-39A

Payload vs. All Launch

Section 5

Predictive Analysis (Classification)

Classification Accuracy

Confusion Matrix

Measure	Derivations	Result
Precision	$PPV = TP / (TP + FP)$	0.67
Accuracy	$ACC = (TP + TN) / (P + N)$	0.89
F1 Score	$F1 = 2TP / (2TP + FP + FN)$	0.80

Conclusions

- After analysis data the CCAFS SLC-40 site and KSC LC-39A site are has most successful launches from all the sites.
- Orbit GEO,HEO,SSOES L1 has the best Success Rate.
- The payload of 0 kg to 5000 kg was more diverse than 6000 kg to 10000
- The Decision Tree model is the best in terms of prediction accuracy for this dataset.

Thank you!
